

### THE HIGH-SPEED MOTORISED FAN RANGE WITH A MISTER FEATURE IN CASE OF FIRE.

The GX200 is lightweight and compact for ease of use inside buildings and stairwells. This is the next generation of fans, unrivalled in terms of weight, airflow and compactness. It can be handled by just one person and is equipped with a low-emission motor which makes less noise and therefore has less impact on the environment.

It has a new motor specification with the Honda GXH, 2.1 HP, which has a runtime of 1hr40 in addition to an increase in efficiency coupled with a decrease in CO<sub>2</sub> emissions (56% lower than conventional motors).

The GX500 provides more powerful ventilation for use in larger buildings, without being bulky. This is the next generation of fans, unrivalled in terms of weight, airflow and compactness. It can be handled by just one person and is equipped with the Honda 4-stroke GX270.

Powershroud technology combines the effect of the airflow from the fan with the tightened beam of airflow from the shroud, guided by the stator vanes.

This technology means the fan can be placed further away from entrances, making it easier for staff and extinction equipment to get through.

The precision and concentration of the airflow also mean smaller openings can be used.
