

THE FILTERING RESPIRATORS WITH A PANORAMIC FIELD OF VISION.

BENEFITS:

Safety and comfort: double-layer seal with threefold sealing edges provides reliable protection and is suitable for almost every face type. The mask body ensures a high level of comfort, even over a long period of time.

Wide field of vision: the 180° wide-angle lens guarantees a large, distortion-free field of vision, with an excellent peripheral view. You can choose between a shock-resistant polycarbonate lens or a scratch-proof Triplex glass visor, which is highly resistant to chemicals.

Five-point head harness: the comfortable five-point head harness ensures not only rapid donning and doffing of the mask, but is large enough not to exert pressure on the user's head.

Efficient ventilation system: the separate inner half mask prevents the lens from fogging and guarantees excellent vision.

Versatile: equipped with an Rd40 connection compliant with standard EN 148-1 for use with all Rd40 filters.

Eyepiece:

PMMA: polymethyl methacrylate

PC: heat-resistant polycarbonate or with anti-scratch coating

Triplex: particularly resistant to chemical aggressions

X-PLORE 6300

Mask body: EPDM
Eyepiece: PMMA
Clamping frame: Plastic

X-PLORE 6530

Mask body: EPDM
Eyepiece: PC
Clamping frame: Stainless Steel

X-PLORE 6570

Mask body: Silicone
Eyepiece: PC
